ZoomInfo Development Assignment

Implement an application which shows 10 questions taken from existing API in a carousel layout.

Instructions

- The application shall be written in Angular 11.
- Display 10 Questions on carousel view (use PrimeNG Library) Please show their questions with the possible answers.
- Fetch the question using this query:
  https://opentdb.com/api.php?amount=1&encode=base64&type=multiple
- Use of NgRX Store + Effect + Selectors
- Each question should not be shown more than once.
- Query the questions ahead of time without waiting time (you shouldn't change the amount parameter of the API).
- Each question should have a 20 seconds timer to answer about.
- The user should have 3 strikes to get the answer wrong.

Possible layout:
